

# Earth-Rite® MULTIPOINT II

## Static Grounding System

The **Earth-Rite® MULTIPOINT II** is a unique static grounding systems that can monitor the simultaneous grounding of up to eight (8) individual pieces of equipment at risk of discharging electrostatic sparks.

**Enquiry** > Click here to submit a product related query or a request for quotation.

To ground and monitor multiple items of equipment at points like multi drum loading stations and mixing stations, IBC loading stations and railcar loading gantries, a large number of conventional static grounding systems would be required to provide protection against incendive electrostatic sparks. In addition to flammable liquid and gas operations, powder processing equipment that typically includes interconnected pipes, fluid bed dryers, hoppers and micronizers would require multiple grounding systems. With the Earth-Rite® MULTIPOINT II up to eight individual items of potentially isolated equipment can be ground monitored simultaneously with a single static grounding system.

The Earth-Rite® MULTIPOINT II is an ATEX / IECEx / cCSAus certified static grounding system which identifies when equipment exceeds ground resistance levels outlined in codes of practice including CLC/TR 60079-32-1 and NFPA 77. The system consists of a hazardous area monitoring unit that contains eight pairs of red and green LED indicators that verify when the equipment at risk of static charge

accumulation has a resistance of 10 ohms or less to the plant's designated true earth grounding point.

For applications where ground monitoring indication is required at the point of operation (e.g. drum filling) local ground status indicator stations can be specified. The Intrinsically Safe indicator stations can be mounted in any EX/HAZLOC atmosphere, are more energy efficient than mains powered indicators and more cost effective than standard EX certified indicators.

Each monitoring channel interfaces with it an individual volt free contact as standard. In addition to the 8 individual volt free contacts a group relay is provided so that multiple ground monitoring channels can be setup to provide a permissive / non-permissive condition to external equipment (e.g. PLCs, pumps, valves, sounders). If a software or hardware error is detected by the Earth-Rite® MULTIPOINT II's self-monitoring function, it activates a fault relay ensuring the system shuts down in a fail-safe condition.

**Earth-Rite® MULTIPOINT II** Static Grounding System

### Earth-Rite® MULTIPOINT II applications include:

- > multiple railcar loading points.
- > multiple drum / tote loading points.
- > liquid / powder mixing and blending.
- > powder conveying equipment.
- > fluid bed dryers.
- > silo / container filling and emptying.
- > hoppers and dust collectors.
- > powder micronizing, pulverising and grinding equipment.

## Earth-Rite® MULTIPOINT II Static Grounding System

The **Earth-Rite® MULTIPOINT II** builds on the success of its predecessor offering equipment specifiers an advanced digitally embedded system that actively monitors the grounding of up to 8 separate items of plant equipment.

The incorporation of embedded digital technology enables the **Earth-Rite® MULTIPOINT II** to:

- > offer unrivalled precision with which a grounding system can monitor EX/HAZLOC grounding and bonding circuits.
- > self-check the EX/HAZLOC monitored grounding circuits so that permissive conditions are only achieved when a resistance value of 10 ohms or less is seen by the micro-controller.
- > offer flexible, energy efficient Intrinsically Safe indicator stations that can be positioned in any Zone or Division around a plant.
- > provide an off the shelf system that incorporates an individual SP/DT relay contact for each monitored channel.
- > provide a group relay function that enables the grouping of any number of monitored channels via a set of SP/DT relay contacts.
- > incorporate software written to the leading industry standard MISRA-C protocol.
- > provide a self-monitoring watchdog emergency shutdown function that ensures a fail-safe condition is achieved if a circuit or software malfunction is detected.

The **Earth-Rite® MULTIPOINT II's** monitoring unit contains 8 pairs of LED ground status indicators (red and green). The unit can be mounted in all ATEX / IECEx zones and all Class and Division rated hazardous locations.

The **Earth-Rite® MULTIPOINT II's** 230 V/110 V AC power supply unit houses eleven (11) SP/DT volt free contacts. 8 of these interface with each monitored grounding channel, 2 provide the grouped channel function and 1 relay provides the fail-safe redundancy output function. The power supply can be installed in Zone 2/21 and Class 1, Div.2, Class II, Div.1, Class III, Div.1 areas. The power supply can be housed in GRP or stainless steel enclosures.

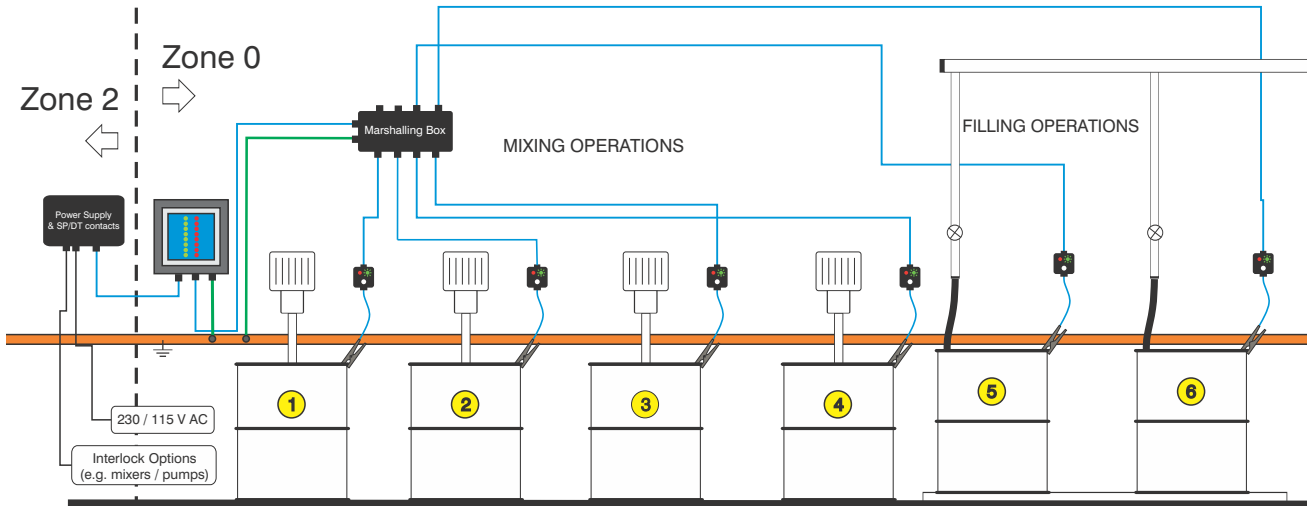

The **Earth-Rite® MULTIPOINT II's** energy efficient external indicator stations provide ground status indication for each individual channel. The attention grabbing GREEN LED pulses continuously when a positive ground connection is made. The indicator stations can be mounted in all ATEX / IECEx zones and all Class and Division rated hazardous locations. In addition to the standard GRP option, stainless steel indicator stations can be specified.

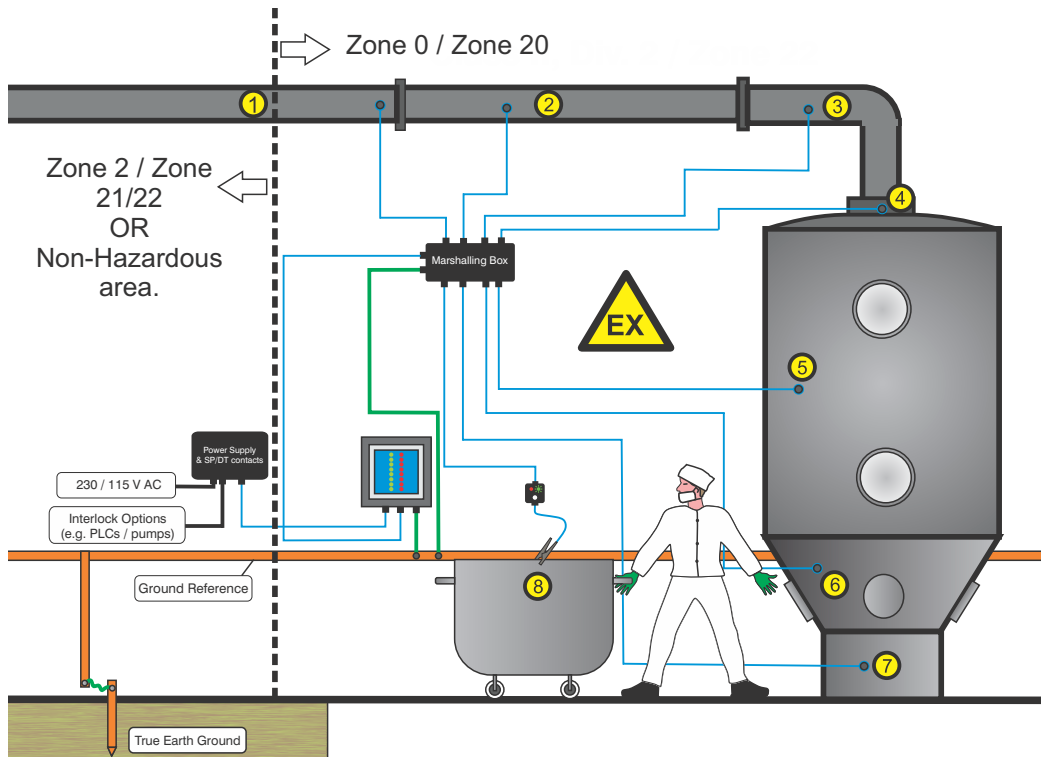

The **Earth-Rite® MULTIPOINT II's** 4 way and 8 way marshalling junction boxes link the monitoring unit with the external ground connection points and external LED ground status indicator stations. The marshalling boxes can be supplied as GRP and stainless steel.

The Earth-Rite® MULTIPOINT II forms part of the Earth-Rite® range of Static Grounding and Bonding Equipment available from Newson Gale Ltd.

**Earth-Rite® MULTIPOINT II** Static Grounding System

The Earth-Rite® MULTIPOINT II's monitoring unit and power supply can be configured to ground and monitor a wide range of equipment. In this example the system is setup to ground four mixing stations (1 to 4) and two filling stations (5 and 6). Each mixer is interlocked with an individual relay corresponding to the equivalent ground monitoring channel. Channels 5 and 6 are grouped via the group relay so that if either drum is not grounded the pump feeding the filling station is shut down immediately, thereby preventing the build up of static on the drums.

In this example the Earth-Rite® MULTIPOINT II is configured to ground multiple interconnected components for a fluid bed dryer system. The marshalling box feeds seven channels out to seven permanent ground connection points [the connection points may be disconnected for routine cleaning, inspection and maintenance]. Channels 1 to 7 are grouped together to provide a single output contact controlling the flow of powder into the fluid bed dryer. Channel 8 utilises an external ground status indicator station to provide the operator with a visual confirmation that the mobile bin is grounded when filled.

**Earth-Rite® MULTIPOINT II** Static Grounding System

Technical Specification (with GRP power supply)

Monitoring unit  
Zone 0/20 Installations

<b>Ambient Temperature Range</b>	-40°C to +60°C
<b>Ingress Protection</b>	IP 66
<b>Construction</b>	Stainless Steel 304
<b>Monitoring Circuit</b>	Intrinsically Safe
<b>Operational Series Ground Resistance</b>	Nominally ≤10 Ohm
<b>Cable Entries</b>	3 x M20, 1 x M25

Power Supply Unit  
Zone 2/21 Installations

<b>Power Supply</b>	110 V or 240 V AC, 50-60 Hz
<b>Current Rating</b>	200 mA
<b>Power Rating</b>	10 Watts
<b>Ambient Temperature Range</b>	-40°C to +60°C
<b>Ingress Protection</b>	IP 66
<b>Construction</b>	GRP with carbon loading
<b>Output to Monitoring Unit</b>	Intrinsically Safe
<b>Output Channel Relay</b>	8 off Voltage free change over switch contacts
<b>Output Group Relay</b>	2 off Voltage free change over switch contacts
<b>Output Fault Relay</b>	1 off Voltage free change over switch contacts
<b>Relay Contact Rating</b>	240 V AC, 5 A, 500 VA max resistive 30 V DC, 2 A, 60 W max resistive
<b>Cable Entries</b>	12 x M20

Marshalling Junction Box

<b>Enclosure Material</b>	GRP with carbon loading
<b>Cable Entries</b>	8 Way - 10 x M20, 1 x M25 4 Way - 6 x M20, 1 x M25

Remote Indicator Station  
Associated Apparatus - Zone 0/20 installation

<b>Enclosure Material</b>	GRP with carbon loading
<b>Cable Entries</b>	1x M20

Product Description	Length	Height	Depth
8-Way Junction Box	259 mm	160 mm	91.4 mm
4-Way Junction Box	160 mm	160 mm	94 mm
Remote Indicator Station	122 mm	122 mm	76.2 mm
Junction Box with Stowage Pin	80 mm	76.2 mm	55.9 mm

## Earth-Rite® MULTIPOINT II Static Grounding System

### Application Spotlight: Grounding multiple components in multiple EX/HAZLOC operations

#### Static grounding solutions: convention versus flexibility.

Most grounding solutions provide grounding protection for discrete pieces of equipment at risk of electrostatic charging like railcars, IBCs and drums. Multiple loading points for such equipment presents more of a challenge.

A more specialised static grounding system, like the Earth-Rite® MULTIPOINT II, provides the benefits of eight discrete static grounding systems rolled up into a single package. This gives installer's the flexibility of providing monitored static grounding protection for multiple items of equipment.

In addition, the Earth-Rite® MULTIPOINT II will continuously check that all components are connected to a reference earth grounding point, thus ensuring that the ground path resistance between the equipment and the reference ground never exceeds 10 ohms. A monitored ground path resistance of 10 ohms or less is recommended in NFPA 77, "Recommended Practice on Static Electricity" and IEC 60079-32-1, "Explosive atmospheres: electrostatic hazards, guidance".

If the Earth-Rite® MULTIPOINT II's monitoring unit detects that an object is not grounded, it will send a signal to the system's relays which, if interlocked with the circuit powering the operation, can halt the process, thereby eliminating the electrostatic charging mechanism and potential charging of un-grounded equipment.

If such an event does occur, the plant's technicians can rapidly identify which connection needs to be investigated. They can do this by referencing the monitoring unit's ground status indicator panel which will indicate which channel needs to be checked. Once the connection to the equipment is re-established the Earth-Rite® MULTIPOINT II's controller will provide a permissive condition for the process to start again.

Earth-Rite® MULTIPOINT II Static Grounding System

The most common set up, from an interlock option perspective, is to halt the entire process via the system's volt free contacts located in the power supply unit. Halting the movement of the product ensures that electrostatic charges are not being generated while a piece of plant equipment does not have grounding protection in place.

Although 8 ground monitoring channels are provided, not all may be required. For example, if only 5 items require static grounding protection, only 5 channels need to be utilised. However, the available 3 channels may be used at some point in the future should any modifications to the process require the addition of more plant equipment.
